TITLE: Storage device for electronic components, such as diodes and capacitors -
uses de-humidifier for lowering moisture content of air within gas-tight housing for
storing electronic components

ABSTRACTED-PUB-NO: DE 29809169U

BASIC-ABSTRACT:

The storage device has a gas-tight housing (12), in which the electronic components are stored in a defined gaseous atmosphere, obtained via a de-humidifier (32) for removing moisture from the gas within the housing.

The de-humidifier may be provided by an absorption drying device with a driven rotor (42) and a concentric layer (44) of an inorganic fibre material containing a metal silicate, for removing moisture from the air stream circulated by the rotor.

USE - For long-term storage of electronic components. e.g. surface mounted devices.

ADVANTAGE - Prevents damage to stored components resulting from air humidity.

CHOSEN-DRAWING: Dwg.1/1
